

**IEM's AI Modeling: Short-term COVID-19 Projections****Date: 11/3/20**

Leveraging over 15 years of support to HHS for medical consequence modeling and our proprietary artificial intelligence (AI) models, IEM believes that our Coronavirus model outputs can be used to assist localities and their medical facilities to better prepare for an increase in hospitalizations, to better plan for and locate drive-through testing facilities, and to determine where increased levels of transmission may be occurring.

**We have been refining our AI model over the past month and are confident in its ability to provide accurate 7-day projections that can be used for operational and logistical planning.**

**AI-based Model Background**

IEM is currently using an AI model to fit data from various sources and project new cases of COVID-19. We do not assume the average number of secondary infections (R-value) stays the same over time. IEM's AI model finds the best R-value over time to evaluate how it changes over the course of the outbreak. The IEM modeling team is running ~11 million simulations to fit each state's data and using the best fit for the R-value to project new cases over the next 7 days. The AI models are executed on a daily basis to evaluate the changing dynamics of the COVID-19 pandemic. Our projections have typically been within 10%, and are often within 5%, of actual confirmed cases.

The projections shown in this document are based on data pulled in as of 11/3/20 9 a.m.

**Please provide any feedback or send any questions that you might have to us. We are continually updating and improving the model, so your feedback is critical.**

**Also, if you have more current or refined data for your State, Commonwealth or Territory that you would like IEM to factor in, please let us know.**

**IEM's Modeling Lead**

Dr. Prasith "Sid" Baccam is a **Computational Epidemiologist expert** at IEM with more than **20 years of experience in medical consequence modeling and simulation of disease outbreaks** and medical consequences following hypothetical attacks with biological agents or emerging infectious diseases. He develops key simulation models and decision support tools at IEM, specializing in public health, disaster response, and medical countermeasures (MCM) to enhance data-driven decision making and improve modeling assumptions.

Upon receiving his **Ph.D. in Applied Mathematics and Immunobiology** at Iowa State University, Dr. Baccam worked as a Postdoctoral Research Associate at Los Alamos National Laboratory where he focused on researching viral and immunological modeling. After his stint at Los Alamos, Dr. Baccam has served as Task Lead in multiple public health projects have allowed him to develop expertise as a mathematical biologist and a leader on high-performance modeling and simulation teams.

He has worked with state and local public health officials as well as Federal agencies, including **HHS**, the Centers for Disease Control and Prevention (**CDC**), and the Department of Homeland Security (**DHS**). Dr. Baccam has published numerous papers on public health response models and implications on policy and has been invited to participate in workshops and symposiums held by the Institute of Medicine (now the National Academy of Health). His modeling results have been briefed to the **Executive Office of the President** and informed two presidential policy actions.

## Illinois State Projections

	Actual Confirmed Cases On:				Projected Cases For:						
	10/30	10/31	11/1	11/2	11/3	11/4	11/5	11/6	11/7	11/8	11/9
Illinois	408,648	416,547	423,527	429,749	437,109	444,780	452,773	461,101	469,778	478,816	488,229

*Note: The State's projection shows a "best estimate" curve (the solid line with circles) and the dotted lines are the upper and lower estimates around that best estimate. Our projections have typically been within 20%, and are often within 10%, of actual confirmed cases.*

## Illinois Counties

	Actual Confirmed Cases On:				Projected Cases For:						
	10/30	10/31	11/1	11/2	11/3	11/4	11/5	11/6	11/7	11/8	11/9
Cook	186,405	189,660	193,102	195,740	198,755	201,924	205,252	208,748	212,419	216,274	220,321
DuPage	24,696	25,201	25,681	26,065	26,566	27,091	27,641	28,216	28,819	29,450	30,110
Kane	18,030	18,390	18,650	18,972	19,321	19,686	20,069	20,471	20,891	21,332	21,794
Lake	21,819	22,278	22,618	22,817	23,098	23,389	23,691	24,005	24,331	24,669	25,019
McHenry	6,953	7,115	7,265	7,416	7,597	7,787	7,988	8,200	8,423	8,658	8,905
Will	19,946	20,358	20,657	21,043	21,436	21,847	22,277	22,727	23,197	23,689	24,203

Some recipients of our daily COVID-19 short-term (7 day) projections have requested projections of demand for: hospital bed, intensive care unit (ICU) beds, and mechanical ventilation. We realize that different states and localities will have different characteristics for hospital demand of COVID-19 cases, and we are presenting the best assumptions we could find for those medical demands based on scientific literature and health data reporting. Specifically:

- **Beds:** For hospitalization, we use a range of 10% and 20% of cases require hospitalization based on CDC's report ([MMWR, March 18, 2020](#)) and state reports of COVID-19 cases.
- **ICU:** The CDC report found that 24% of hospitalized cases require ICU care.
- **Ventilators:** Based on clinical data from China and state reports, we assume that 50% of ICU cases require a ventilator.

If you have other estimates for these assumptions, please share them with us as we work to refine our modeling, assumptions, and data on a daily basis.

The medical demands shown in the table assume 20% of **cumulative** confirmed cases require hospitalization. To get the medical demand for the assumption that 10% of confirmed cases require hospitalization, simply divide the demand by 2.

### Illinois Medical Demands by County

	Actual Confirmed Cases On:				Projected Cases (Hospitalized) [ICU] {Ventilator} For:											
	10/30	10/31	11/1	11/2	11/4				11/6				11/8			
Cook	186,405	189,660	193,102	195,740	201,924	(40,385)	[9,692]	{4,846}	208,748	(41,750)	[10,020]	{5,010}	216,274	(43,255)	[10,381]	{5,191}
DuPage	24,696	25,201	25,681	26,065	27,091	(5,418)	[1,300]	{650}	28,216	(5,643)	[1,354]	{677}	29,450	(5,890)	[1,414]	{707}
Kane	18,030	18,390	18,650	18,972	19,686	(3,937)	[945]	{472}	20,471	(4,094)	[983]	{491}	21,332	(4,266)	[1,024]	{512}
Lake	21,819	22,278	22,618	22,817	23,389	(4,678)	[1,123]	{561}	24,005	(4,801)	[1,152]	{576}	24,669	(4,934)	[1,184]	{592}
McHenry	6,953	7,115	7,265	7,416	7,787	(1,557)	[374]	{187}	8,200	(1,640)	[394]	{197}	8,658	(1,732)	[416]	{208}
Will	19,946	20,358	20,657	21,043	21,847	(4,369)	[1,049]	{524}	22,727	(4,545)	[1,091]	{545}	23,689	(4,738)	[1,137]	{569}
