

**IEM's AI Modeling: Short-term COVID-19 Projections****Date: 2/3/21**

Leveraging over 15 years of support to HHS for medical consequence modeling and our proprietary artificial intelligence (AI) models, IEM believes that our Coronavirus model outputs can be used to assist localities and their medical facilities to better prepare for an increase in hospitalizations, to better plan for and locate drive-through testing facilities, and to determine where increased levels of transmission may be occurring.

**We have been refining our AI model over the past month and are confident in its ability to provide accurate 7-day projections that can be used for operational and logistical planning.**

**AI-based Model Background**

IEM is currently using an AI model to fit data from various sources and project new cases of COVID-19. We do not assume the average number of secondary infections (R-value) stays the same over time. IEM's AI model finds the best R-value over time to evaluate how it changes over the course of the outbreak. The IEM modeling team is running ~11 million simulations to fit each state's data and using the best fit for the R-value to project new cases over the next 7 days. The AI models are executed on a daily basis to evaluate the changing dynamics of the COVID-19 pandemic. Our projections have typically been within 10%, and are often within 5%, of actual confirmed cases.

The projections shown in this document are based on data pulled in as of 2/3/21 9 a.m.

**Please provide any feedback or send any questions that you might have to us. We are continually updating and improving the model, so your feedback is critical.**

**Also, if you have more current or refined data for your State, Commonwealth or Territory that you would like IEM to factor in, please let us know.**

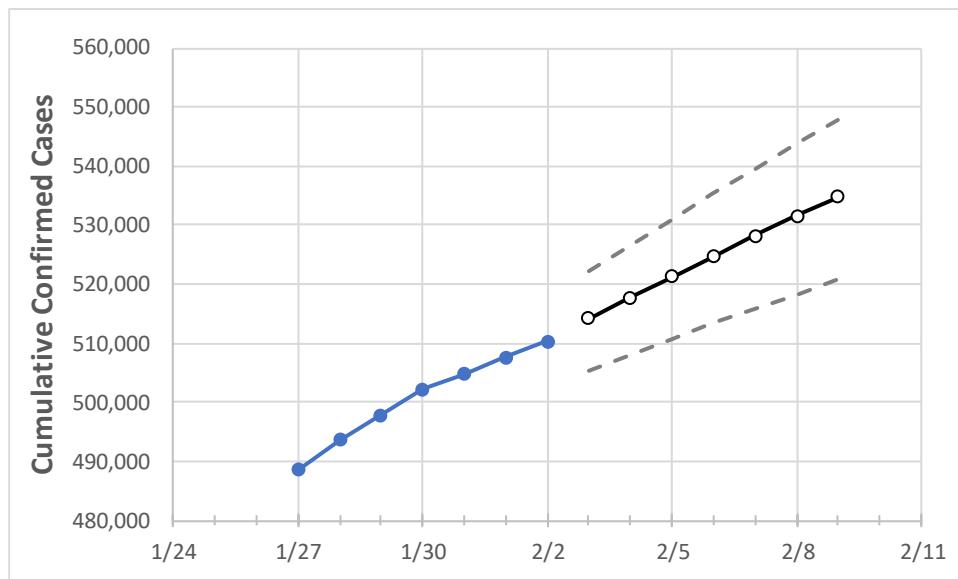

**IEM's Modeling Lead**

Dr. Prasith "Sid" Baccam is a **Computational Epidemiologist expert** at IEM with more than **20 years of experience in medical consequence modeling and simulation of disease outbreaks** and medical consequences following hypothetical attacks with biological agents or emerging infectious diseases. He develops key simulation models and decision support tools at IEM, specializing in public health, disaster response, and medical countermeasures (MCM) to enhance data-driven decision making and improve modeling assumptions.

Upon receiving his **Ph.D. in Applied Mathematics and Immunobiology** at Iowa State University, Dr. Baccam worked as a Postdoctoral Research Associate at Los Alamos National Laboratory where he focused on researching viral and immunological modeling. After his stint at Los Alamos, Dr. Baccam has served as Task Lead in multiple public health projects have allowed him to develop expertise as a mathematical biologist and a leader on high-performance modeling and simulation teams.

He has worked with state and local public health officials as well as Federal agencies, including **HHS**, the Centers for Disease Control and Prevention (**CDC**), and the Department of Homeland Security (**DHS**). Dr. Baccam has published numerous papers on public health response models and implications on policy and has been invited to participate in workshops and symposiums held by the Institute of Medicine (now the National Academy of Health). His modeling results have been briefed to the **Executive Office of the President** and informed two presidential policy actions.

## Virginia State Projections

Note: The Commonwealth's projection shows a "best estimate" curve (the solid line with circles) and the dotted lines are the upper and lower estimates around that best estimate. Our projections have typically been within 10%, and are often within 5%, of actual confirmed cases.

## Virginia Counties

	Actual Confirmed Cases On:				Projected Cases For:							
	1/30	1/31	2/1	2/2	2/3	2/4	2/5	2/6	2/7	2/8	2/9	
Alexandria City	9,435	9,482	9,528	9,544	9,585	9,625	9,664	9,702	9,739	9,774	9,808	
Arlington	11,691	11,769	11,806	11,867	11,931	11,996	12,059	12,121	12,183	12,242	12,301	
Fairfax	60,199	60,436	60,690	60,998	61,319	61,629	61,925	62,226	62,518	62,803	63,072	
Henrico	18,371	18,463	18,624	18,784	18,945	19,097	19,254	19,408	19,560	19,709	19,851	
James City	3,434	3,454	3,486	3,501	3,542	3,581	3,621	3,658	3,695	3,731	3,766	
Loudoun	20,384	20,484	20,618	20,791	21,054	21,313	21,572	21,839	22,108	22,376	22,646	
Prince William	40,011	40,207	40,383	40,519	40,741	40,958	41,173	41,382	41,576	41,779	41,971	
Virginia Beach City	26,066	26,211	26,420	26,580	26,793	27,004	27,212	27,411	27,615	27,811	28,010	

Some recipients of our daily COVID-19 short-term (7 day) projections have requested projections of demand for: hospital bed, intensive care unit (ICU) beds, and mechanical ventilation. We realize that different states and localities will have different characteristics for hospital demand of COVID-19 cases, and we are presenting the best assumptions we could find for those medical demands based on scientific literature and health data reporting. Specifically:

- **Beds:** For hospitalization, we use a range of 10% and 20% of cases require hospitalization based on CDC's report ([MMWR, March 18, 2020](#)) and state reports of COVID-19 cases.
- **ICU:** The CDC report found that 24% of hospitalized cases require ICU care.
- **Ventilators:** Based on clinical data from China and state reports, we assume that 50% of ICU cases require a ventilator.

If you have other estimates for these assumptions, please share them with us as we work to refine our modeling, assumptions, and data on a daily basis.

The medical demands shown in the table assume 20% of **cumulative** confirmed cases require hospitalization. To get the medical demand for the assumption that 10% of confirmed cases require hospitalization, simply divide the demand by 2.

#### Virginia Medical Demands by County

	Actual Confirmed Cases On:				Projected Cases (Hospitalized) [ICU] {Ventilator} For:			
	1/30	1/31	2/1	2/2	2/4	2/6	2/8	
Alexandria City	9,435	9,482	9,528	9,544	9,625 (1,925) [462] {231}	9,702 (1,940) [466] {233}	9,774 (1,955) [469] {235}	
Arlington	11,691	11,769	11,806	11,867	11,996 (2,399) [576] {288}	12,121 (2,424) [582] {291}	12,242 (2,448) [588] {294}	
Fairfax	60,199	60,436	60,690	60,998	61,629 (12,326) [2,958] {1,479}	62,226 (12,445) [2,987] {1,493}	62,803 (12,561) [3,015] {1,507}	
Henrico	18,371	18,463	18,624	18,784	19,097 (3,819) [917] {458}	19,408 (3,882) [932] {466}	19,709 (3,942) [946] {473}	
James City	3,434	3,454	3,486	3,501	3,581 (716) [172] {86}	3,658 (732) [176] {88}	3,731 (746) [179] {90}	
Loudoun	20,384	20,484	20,618	20,791	21,313 (4,263) [1,023] {512}	21,839 (4,368) [1,048] {524}	22,376 (4,475) [1,074] {537}	
Prince William	40,011	40,207	40,383	40,519	40,958 (8,192) [1,966] {983}	41,382 (8,276) [1,986] {993}	41,779 (8,356) [2,005] {1,003}	
Virginia Beach City	26,066	26,211	26,420	26,580	27,004 (5,401) [1,296] {648}	27,411 (5,482) [1,316] {658}	27,811 (5,562) [1,335] {667}
