

## IEM's AI Modeling: Short-term COVID-19 Projections

Date: 2/4/21

Leveraging over 15 years of support to HHS for medical consequence modeling and our proprietary artificial intelligence (AI) models, IEM believes that our Coronavirus model outputs can be used to assist localities and their medical facilities to better prepare for an increase in hospitalizations, to better plan for and locate drive-through testing facilities, and to determine where increased levels of transmission may be occurring.

**We have been refining our AI model over the past month and are confident in its ability to provide accurate 7-day projections that can be used for operational and logistical planning.**

### AI-based Model Background

IEM is currently using an AI model to fit data from various sources and project new cases of COVID-19. We do not assume the average number of secondary infections (R-value) stays the same over time. IEM's AI model finds the best R-value over time to evaluate how it changes over the course of the outbreak. The IEM modeling team is running ~11 million simulations to fit each state's data and using the best fit for the R-value to project new cases over the next 7 days. The AI models are executed on a daily basis to evaluate the changing dynamics of the COVID-19 pandemic. Our projections have typically been within 10%, and are often within 5%, of actual confirmed cases.

The projections shown in this document are based on data pulled in as of 2/4/21 9 a.m.

**Please provide any feedback or send any questions that you might have to us. We are continually updating and improving the model, so your feedback is critical.**

**Also, if you have more current or refined data for your State, Commonwealth or Territory that you would like IEM to factor in, please let us know.**

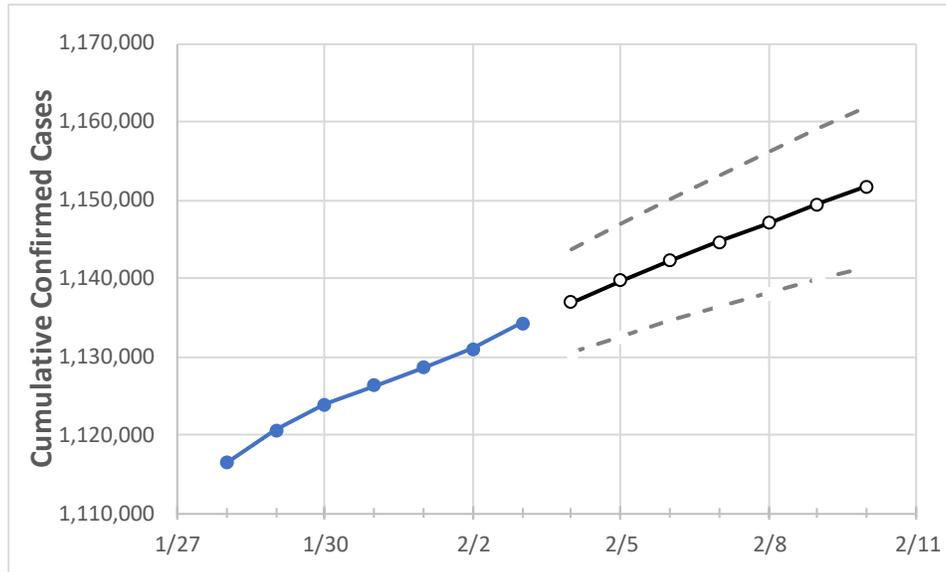

### IEM's Modeling Lead

Dr. Prasith "Sid" Baccam is a **Computational Epidemiologist expert** at IEM with more than **20 years of experience in medical consequence modeling and simulation of disease outbreaks** and medical consequences following hypothetical attacks with biological agents or emerging infectious diseases. He develops key simulation models and decision support tools at IEM, specializing in public health, disaster response, and medical countermeasures (MCM) to enhance data-driven decision making and improve modeling assumptions.

Upon receiving his **Ph.D. in Applied Mathematics and Immunobiology** at Iowa State University, Dr. Baccam worked as a Postdoctoral Research Associate at Los Alamos National Laboratory where he focused on researching viral and immunological modeling. After his stint at Los Alamos, Dr. Baccam has served as Task Lead in multiple public health projects have allowed him to develop expertise as a mathematical biologist and a leader on high-performance modeling and simulation teams.

He has worked with state and local public health officials as well as Federal agencies, including **HHS**, the Centers for Disease Control and Prevention (**CDC**), and the Department of Homeland Security (**DHS**). Dr. Baccam has published numerous papers on public health response models and implications on policy and has been invited to participate in workshops and symposiums held by the Institute of Medicine (now the National Academy of Health). His modeling results have been briefed to the **Executive Office of the President** and informed two presidential policy actions.

### Illinois State Projections

	Actual Confirmed Cases On:					Projected Cases For:					
	1/31	2/1	2/2	2/3	2/4	2/5	2/6	2/7	2/8	2/9	2/10

Illinois	1,126,301	1,128,613	1,130,917	1,134,231	1,136,984	1,139,663	1,142,206	1,144,680	1,147,099	1,149,405	1,151,674
----------	-----------	-----------	-----------	-----------	-----------	-----------	-----------	-----------	-----------	-----------	-----------

Note: The State's projection shows a "best estimate" curve (the solid line with circles) and the dotted lines are the upper and lower estimates around that best estimate. Our projections have typically been within 10%, and are often within 5%, of actual confirmed cases.

### Illinois Counties

	Actual Confirmed Cases On:				Projected Cases For:						
	1/31	2/1	2/2	2/3	2/4	2/5	2/6	2/7	2/8	2/9	2/10
Cook	453,634	454,485	455,138	456,144	457,094	457,991	458,844	459,673	460,452	461,210	461,949
DuPage	72,454	72,610	72,732	72,945	73,127	73,300	73,469	73,627	73,778	73,927	74,074
Kane	48,243	48,339	48,425	48,542	48,666	48,786	48,900	49,010	49,119	49,222	49,321
Lake	55,958	56,107	56,271	56,469	56,632	56,789	56,947	57,098	57,249	57,393	57,535
McHenry	22,765	22,837	22,892	22,976	23,041	23,105	23,166	23,226	23,284	23,340	23,395
Will	61,289	61,416	61,556	61,737	61,908	62,077	62,236	62,392	62,547	62,700	62,847

Some recipients of our daily COVID-19 short-term (7 day) projections have requested projections of demand for: hospital bed, intensive care unit (ICU) beds, and mechanical ventilation. We realize that different states and localities will have different characteristics for hospital demand of COVID-19 cases, and we are presenting the best assumptions we could find for those medical demands based on scientific literature and health data reporting. Specifically:

- **Beds:** For hospitalization, we use a range of 10% and 20% of cases require hospitalization based on CDC's report ([MMWR, March 18, 2020](#)) and state reports of COVID-19 cases.
- **ICU:** The CDC report found that 24% of hospitalized cases require ICU care.
- **Ventilators:** Based on clinical data from China and state reports, we assume that 50% of ICU cases require a ventilator.

If you have other estimates for these assumptions, please share them with us as we work to refine our modeling, assumptions, and data on a daily basis.

The medical demands shown in the table assume 20% of **cumulative** confirmed cases require hospitalization. To get the medical demand for the assumption that 10% of confirmed cases require hospitalization, simply divide the demand by 2.

### Illinois Medical Demands by County

	Actual Confirmed Cases On:				Projected Cases (Hospitalized) [ICU] {Ventilator} For:											
	1/31	2/1	2/2	2/3	2/5				2/7				2/9			
Cook	453,634	454,485	455,138	456,144	457,991	(91,598)	[21,984]	{10,992}	459,673	(91,935)	[22,064]	{11,032}	461,210	(92,242)	[22,138]	{11,069}
DuPage	72,454	72,610	72,732	72,945	73,300	(14,660)	[3,518]	{1,759}	73,627	(14,725)	[3,534]	{1,767}	73,927	(14,785)	[3,549]	{1,774}
Kane	48,243	48,339	48,425	48,542	48,786	(9,757)	[2,342]	{1,171}	49,010	(9,802)	[2,352]	{1,176}	49,222	(9,844)	[2,363]	{1,181}
Lake	55,958	56,107	56,271	56,469	56,789	(11,358)	[2,726]	{1,363}	57,098	(11,420)	[2,741]	{1,370}	57,393	(11,479)	[2,755]	{1,377}
McHenry	22,765	22,837	22,892	22,976	23,105	(4,621)	[1,109]	{555}	23,226	(4,645)	[1,115]	{557}	23,340	(4,668)	[1,120]	{560}
