

## IEM's AI Modeling: Short-term COVID-19 Projections

Date: 8/20/21

Leveraging over 15 years of support to HHS for medical consequence modeling and our proprietary artificial intelligence (AI) models, IEM believes that our Coronavirus model outputs can be used to assist localities and their medical facilities to better prepare for an increase in hospitalizations, to better plan for and locate drive-through testing facilities, and to determine where increased levels of transmission may be occurring.

**We have been refining our AI model over the past month and are confident in its ability to provide accurate 7-day projections that can be used for operational and logistical planning.**

### AI-based Model Background

IEM is currently using an AI model to fit data from various sources and project new cases of COVID-19. We do not assume the average number of secondary infections (R-value) stays the same over time. IEM's AI model finds the best R-value over time to evaluate how it changes over the course of the outbreak. The IEM modeling team is running ~11 million simulations to fit each state's data and using the best fit for the R-value to project new cases over the next 7 days. The AI models are executed on a daily basis to evaluate the changing dynamics of the COVID-19 pandemic. Our projections have typically been within 10%, and are often within 5%, of actual confirmed cases.

The projections shown in this document are based on data pulled in as of 8/20/21 9 a.m.

**Please provide any feedback or send any questions that you might have to us. We are continually updating and improving the model, so your feedback is critical.**

**Also, if you have more current or refined data for your State, Commonwealth or Territory that you would like IEM to factor in, please let us know.**

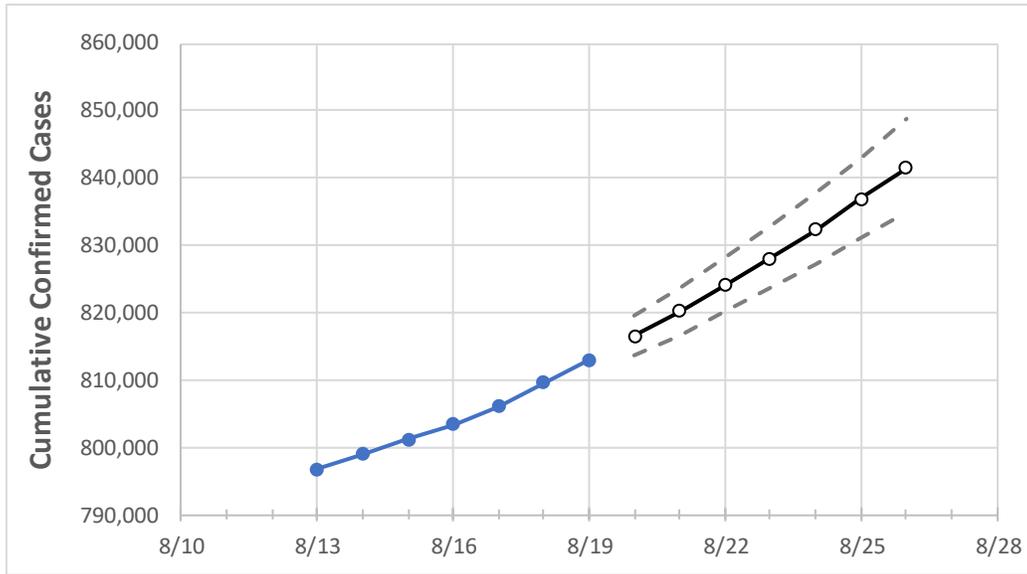

### IEM's Modeling Lead

Dr. Prasith "Sid" Baccam is a **Computational Epidemiologist expert** at IEM with more than **20 years of experience in medical consequence modeling and simulation of disease outbreaks** and medical consequences following hypothetical attacks with biological agents or emerging infectious diseases. He develops key simulation models and decision support tools at IEM, specializing in public health, disaster response, and medical countermeasures (MCM) to enhance data-driven decision making and improve modeling assumptions.

Upon receiving his **Ph.D. in Applied Mathematics and Immunobiology** at Iowa State University, Dr. Baccam worked as a Postdoctoral Research Associate at Los Alamos National Laboratory where he focused on researching viral and immunological modeling. After his stint at Los Alamos, Dr. Baccam has served as Task Lead in multiple public health projects have allowed him to develop expertise as a mathematical biologist and a leader on high-performance modeling and simulation teams.

He has worked with state and local public health officials as well as Federal agencies, including **HHS**, the Centers for Disease Control and Prevention (**CDC**), and the Department of Homeland Security (**DHS**). Dr. Baccam has published numerous papers on public health response models and implications on policy and has been invited to participate in workshops and symposiums held by the Institute of Medicine (now the National Academy of Health). His modeling results have been briefed to the **Executive Office of the President** and informed two presidential policy actions.

### Indiana State Projections

	Actual Confirmed Cases On:				Projected Cases For:							
	8/16	8/17	8/18	8/19	8/20	8/21	8/22	8/23	8/24	8/25	8/26	
Indiana	803,403	806,094	809,545	813,046	816,519	820,180	824,042	828,093	832,358	836,857	841,526	

Note: The State’s projection shows a “best estimate” curve (the solid line with circles) and the dotted lines are the upper and lower estimates around that best estimate. Our projections have typically been within 10%, and are often within 5%, of actual confirmed cases.

### Indiana Counties

	Actual Confirmed Cases On:				Projected Cases For:							
	8/16	8/17	8/18	8/19	8/20	8/21	8/22	8/23	8/24	8/25	8/26	
Decatur	3,073	3,091	3,106	3,136	3,160	3,188	3,218	3,251	3,289	3,330	3,376	
Hamilton	38,753	38,848	38,942	39,109	39,244	39,385	39,533	39,689	39,853	40,026	40,208	
Hendricks	18,934	19,010	19,103	19,202	19,295	19,395	19,498	19,609	19,727	19,853	19,987	
Johnson	19,846	19,918	20,011	20,093	20,193	20,298	20,407	20,523	20,647	20,778	20,914	
Lake	58,157	58,287	58,383	58,476	58,585	58,699	58,817	58,941	59,071	59,204	59,343	
Madison	14,384	14,437	14,513	14,584	14,659	14,736	14,817	14,902	14,989	15,081	15,176	
Marion	110,514	110,865	111,186	111,605	112,032	112,471	112,930	113,408	113,899	114,416	114,946	
St. Joseph	38,095	38,143	38,231	38,294	38,364	38,437	38,515	38,596	38,682	38,771	38,867	

Some recipients of our daily COVID-19 short-term (7 day) projections have requested projections of demand for: hospital bed, intensive care unit (ICU) beds, and mechanical ventilation. We realize that different states and localities will have different characteristics for hospital demand of COVID-19 cases, and we are presenting the best assumptions we could find for those medical demands based on scientific literature and health data reporting. Specifically:

- **Beds:** For hospitalization, we use a range of 10% and 20% of cases require hospitalization based on CDC's report ([MMWR, March 18, 2020](#)) and state reports of COVID-19 cases.
- **ICU:** The CDC report found that 24% of hospitalized cases require ICU care.
- **Ventilators:** Based on clinical data from China and state reports, we assume that 50% of ICU cases require a ventilator.

If you have other estimates for these assumptions, please share them with us as we work to refine our modeling, assumptions, and data on a daily basis.

The medical demands shown in the table assume 20% of **cumulative** confirmed cases require hospitalization. To get the medical demand for the assumption that 10% of confirmed cases require hospitalization, simply divide the demand by 2.

### Indiana Medical Demands by County

	Actual Confirmed Cases On:				Projected Cases (Hospitalized) [ICU] {Ventilator} For:											
	8/16	8/17	8/18	8/19	8/21				8/23				8/25			
Decatur	3,073	3,091	3,106	3,136	3,188 (638) [153] {77}				3,251 (650) [156] {78}				3,330 (666) [160] {80}			
Hamilton	38,753	38,848	38,942	39,109	39,385 (7,877) [1,891] {945}				39,689 (7,938) [1,905] {953}				40,026 (8,005) [1,921] {961}			
Hendricks	18,934	19,010	19,103	19,202	19,395 (3,879) [931] {465}				19,609 (3,922) [941] {471}				19,853 (3,971) [953] {476}			
Johnson	19,846	19,918	20,011	20,093	20,298 (4,060) [974] {487}				20,523 (4,105) [985] {493}				20,778 (4,156) [997] {499}			
Lake	58,157	58,287	58,383	58,476	58,699 (11,740) [2,818] {1,409}				58,941 (11,788) [2,829] {1,415}				59,204 (11,841) [2,842] {1,421}			
Madison	14,384	14,437	14,513	14,584	14,736 (2,947) [707] {354}				14,902 (2,980) [715] {358}				15,081 (3,016) [724] {362}			
Marion	110,514	110,865	111,186	111,605	112,471 (22,494) [5,399] {2,699}				113,408 (22,682) [5,444] {2,722}				114,416 (22,883) [5,492] {2,746}			
St. Joseph	38,095	38,143	38,231	38,294	38,437 (7,687) [1,845] {922}				38,596 (7,719) [1,853] {926}				38,771 (7,754) [1,861] {931}
