

**IEM's AI Modeling: Short-term COVID-19 Projections****Date: 7/17/20**

Leveraging over 15 years of support to HHS for medical consequence modeling and our proprietary artificial intelligence (AI) models, IEM believes that our Coronavirus model outputs can be used to assist localities and their medical facilities to better prepare for an increase in hospitalizations, to better plan for and locate drive-through testing facilities, and to determine where increased levels of transmission may be occurring.

**We have been refining our AI model over the past month and are confident in its ability to provide accurate 7-day projections that can be used for operational and logistical planning.**

**AI-based Model Background**

IEM is currently using an AI model to fit data from various sources and project new cases of COVID-19. We do not assume the average number of secondary infections (R-value) stays the same over time. IEM's AI model finds the best R-value over time to evaluate how it changes over the course of the outbreak. The IEM modeling team is running ~11 million simulations to fit each state's data and using the best fit for the R-value to project new cases over the next 7 days. The AI models are executed on a daily basis to evaluate the changing dynamics of the COVID-19 pandemic. Our projections have typically been within 20%, and are often within 10%, of actual confirmed cases.

The projections shown in this document are based on data pulled in as of 7/17/20 11 a.m.

**Please provide any feedback or send any questions that you might have to us. We are continually updating and improving the model, so your feedback is critical.**

**Also, if you have more current or refined data for your State, Commonwealth or Territory that you would like IEM to factor in, please let us know.**

**IEM's Modeling Lead**

Dr. Prasith "Sid" Baccam is a **Computational Epidemiologist expert** at IEM with more than **20 years of experience in medical consequence modeling and simulation of disease outbreaks** and medical consequences following hypothetical attacks with biological agents or emerging infectious diseases. He develops key simulation models and decision support tools at IEM, specializing in public health, disaster response, and medical countermeasures (MCM) to enhance data-driven decision making and improve modeling assumptions.

Upon receiving his **Ph.D. in Applied Mathematics and Immunobiology** at Iowa State University, Dr. Baccam worked as a Postdoctoral Research Associate at Los Alamos National Laboratory where he focused on researching viral and immunological modeling. After his stint at Los Alamos, Dr. Baccam has served as Task Lead in multiple public health projects have allowed him to develop expertise as a mathematical biologist and a leader on high-performance modeling and simulation teams.

He has worked with state and local public health officials as well as Federal agencies, including **HHS**, the Centers for Disease Control and Prevention (**CDC**), and the Department of Homeland Security (**DHS**). Dr. Baccam has published numerous papers on public health response models and implications on policy and has been invited to participate in workshops and symposiums held by the Institute of Medicine (now the National Academy of Health). His modeling results have been briefed to the **Executive Office of the President** and informed two presidential policy actions.

## Illinois State Projections

	Actual Confirmed Cases On:				Projected Cases For:						
	7/13	7/14	7/15	7/16	7/17	7/18	7/19	7/20	7/21	7/22	7/23
Illinois	154,781	155,490	156,681	157,950	159,082	160,250	161,454	162,696	163,978	165,299	166,661

*Note: The State's projection shows a "best estimate" curve (the solid line with circles) and the dotted lines are the upper and lower estimates around that best estimate. Our projections have typically been within 20%, and are often within 10%, of actual confirmed cases.*

## Illinois Counties

	Actual Confirmed Cases On:				Projected Cases For:						
	7/13	7/14	7/15	7/16	7/17	7/18	7/19	7/20	7/21	7/22	7/23
Cook	95,884	96,186	96,662	97,214	97,661	98,114	98,574	99,040	99,513	99,993	100,479
DuPage	9,794	9,810	9,867	9,917	9,963	10,009	10,055	10,101	10,146	10,192	10,237
Kane	8,137	8,151	8,218	8,262	8,298	8,333	8,370	8,407	8,444	8,482	8,520
Lake	10,422	10,464	10,561	10,653	10,723	10,794	10,868	10,944	11,023	11,104	11,187
McHenry	2,285	2,309	2,347	2,384	2,415	2,443	2,469	2,493	2,518	2,547	2,574
Will	7,340	7,382	7,436	7,476	7,527	7,578	7,631	7,684	7,738	7,794	7,850

Some recipients of our daily COVID-19 short-term (7 day) projections have requested projections of demand for: hospital bed, intensive care unit (ICU) beds, and mechanical ventilation. We realize that different states and localities will have different characteristics for hospital demand of COVID-19 cases, and we are presenting the best assumptions we could find for those medical demands based on scientific literature and health data reporting. Specifically:

- **Beds:** For hospitalization, we use a range of 10% and 20% of cases require hospitalization based on CDC's report ([MMWR, March 18, 2020](#)) and state reports of COVID-19 cases.
- **ICU:** The CDC report found that 24% of hospitalized cases require ICU care.
- **Ventilators:** Based on clinical data from China and state reports, we assume that 50% of ICU cases require a ventilator.

If you have other estimates for these assumptions, please share them with us as we work to refine our modeling, assumptions, and data on a daily basis.

The medical demands shown in the table assume 20% of **cumulative** confirmed cases require hospitalization. To get the medical demand for the assumption that 10% of confirmed cases require hospitalization, simply divide the demand by 2.

### Illinois Medical Demands by County

	Actual Confirmed Cases On:				Projected Cases (Hospitalized) [ICU] {Ventilator} For:											
	7/13	7/14	7/15	7/16	7/18				7/20				7/22			
Cook	95,884	96,186	96,662	97,214	98,114	(19,623)	[4,709]	{2,355}	99,040	(19,808)	[4,754]	{2,377}	99,993	(19,999)	[4,800]	{2,400}
DuPage	9,794	9,810	9,867	9,917	10,009	(2,002)	[480]	{240}	10,101	(2,020)	[485]	{242}	10,192	(2,038)	[489]	{245}
Kane	8,137	8,151	8,218	8,262	8,333	(1,667)	[400]	{200}	8,407	(1,681)	[404]	{202}	8,482	(1,696)	[407]	{204}
Lake	10,422	10,464	10,561	10,653	10,794	(2,159)	[518]	{259}	10,944	(2,189)	[525]	{263}	11,104	(2,221)	[533]	{266}
McHenry	2,285	2,309	2,347	2,384	2,443	(489)	[117]	{59}	2,493	(499)	[120]	{60}	2,547	(509)	[122]	{61}
Will	7,340	7,382	7,436	7,476	7,578	(1,516)	[364]	{182}	7,684	(1,537)	[369]	{184}	7,794	(1,559)	[374]	{187}
